Calculating when elective AAA repair improves survival
Health Technology Assessment 2015; Vol. 19: No. 32
DOI: 10.3310/hta19320

NIHR Journals Library www.journalslibrary.nihr.ac.uk
Plain English summary

Abdominal aortic aneurysm (AAA) is a ballooning of the main artery supplying the body; large AAAs may grow until they burst (rupture), at which point 80% of patients die. Currently, repair by major surgery or by inserting a stent-graft is considered if the AAA causes pain or reaches 5.5 cm in diameter for men and 5.0 cm for women. As with all surgery, there are risks associated with repair. These risks must be weighed against the risk of AAA rupture when considering whether or not to treat patients with AAA.

We gathered the best information available on factors that influence the rate of AAA growth, the risk of rupture, the risk of repair and the long-term outcomes of patients who have had a repair. This information was combined using a custom-designed computer program called the Aneurysm Repair Decision Aid (ARDA). The ARDA aims to provide information to help patients and surgeons decide on the best treatment strategy for the AAA. The main information ARDA provides is the expected AAA growth rate and risk of rupture, the chance a patient will need AAA repair, the chance a patient will survive AAA repair and the chance a patient will survive for 5 and 10 years following AAA repair.

We assessed both the clinical and economic impacts of using the ARDA in clinical practice and found that it provides valuable information that could improve decision-making for patients and clinicians.
Health Technology Assessment

ISSN 1366-5278 (Print)
ISSN 2046-4924 (Online)

Impact factor: 5.116

Health Technology Assessment is indexed in MEDLINE, CINAHL, EMBASE, The Cochrane Library and the ISI Science Citation Index and is assessed for inclusion in the Database of Abstracts of Reviews of Effects.

This journal is a member of and subscribes to the principles of the Committee on Publication Ethics (COPE) (www.publicationethics.org/).

Criteria for inclusion in the Health Technology Assessment journal

Reports are published in Health Technology Assessment (HTA) if (1) they have resulted from work for the HTA programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

Reviews in Health Technology Assessment are termed ‘systematic’ when the account of the search appraisal and synthesis methods (to minimise biases and random errors) would, in theory, permit the replication of the review by others.

HTA programme

The HTA programme, part of the National Institute for Health Research (NIHR), was set up in 1993. It produces high-quality research information on the effectiveness, costs and broader impact of health technologies for those who use, manage and provide care in the NHS. ‘Health technologies’ are broadly defined as all interventions used to promote health, prevent and treat disease, and improve rehabilitation and long-term care.

The journal is indexed in NHS Evidence via its abstracts included in MEDLINE and its Technology Assessment Reports inform National Institute for Health and Care Excellence (NICE) guidance. HTA research is also an important source of evidence for National Screening Committee (NSC) policy decisions.

For more information about the HTA programme please visit the website: http://www.nets.nihr.ac.uk/programmes/hta

This report

The research reported in this issue of the journal was funded by the HTA programme as project number 09/91/39. The contractual start date was in May 2011. The draft report began editorial review in May 2014 and was accepted for publication in August 2014. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HTA editors and publisher have tried to ensure the accuracy of the authors’ report and would like to thank the reviewers for their constructive comments on the draft document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the HTA programme or the Department of Health. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the HTA programme or the Department of Health.
