Plain English summary

Obstructive sleep apnoea (OSA) is a condition in which the walls of the throat relax during sleep, repeatedly blocking the airway for a few seconds, which disrupts sleep and makes some people very sleepy in the daytime. OSA affects up to one in five older people, so as more people get older the best treatment needs to be found. OSA can be treated with continuous positive airway pressure (CPAP), in which the patient breathes pressurised air through a mask, keeping the throat open. CPAP is already known to help middle-aged people with OSA, but the benefit in older people is unknown.

We carried out the trial in 278 people with OSA syndrome (which means OSA plus symptoms of sleepiness) aged > 65 years in UK sleep centres. Some patients were randomly allocated to receive CPAP and some to receive their usual care without CPAP. We measured daytime sleepiness and treatment costs for 12 months. We took steps to avoid a biased result by ensuring that the researchers assessing the sleepiness were unaware of which treatment the patients received.

Our results showed that OSA syndrome patients treated with CPAP had significantly less daytime sleepiness than those who did not receive CPAP. We believe that this result is reliable because 83% of the patients who started the trial completed it. A comparison of the costs of treatment suggests that CPAP would meet the usual criteria for being funded by the NHS.

Overall, this study supports the use of CPAP in older people with OSA syndrome and shows that it would be good value for money in the NHS.
Criteria for inclusion in the Health Technology Assessment journal

Reports are published in Health Technology Assessment (HTA) if (1) they have resulted from work for the HTA programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

Reviews in Health Technology Assessment are termed ‘systematic’ when the account of the search appraisal and synthesis methods (to minimise biases and random errors) would, in theory, permit the replication of the review by others.

HTA programme

The HTA programme, part of the National Institute for Health Research (NIHR), was set up in 1993. It produces high-quality research information on the effectiveness, costs and broader impact of health technologies for those who use, manage and provide care in the NHS. ‘Health technologies’ are broadly defined as all interventions used to promote health, prevent and treat disease, and improve rehabilitation and long-term care.

The journal is indexed in NHS Evidence via its abstracts included in MEDLINE and its Technology Assessment Reports inform National Institute for Health and Care Excellence (NICE) guidance. HTA research is also an important source of evidence for National Screening Committee (NSC) policy decisions.

For more information about the HTA programme please visit the website: http://www.nets.nihr.ac.uk/programmes/hta

This report

The research reported in this issue of the journal was funded by the HTA programme as project number 08/56/02. The contractual start date was in August 2009. The draft report began editorial review in November 2013 and was accepted for publication in September 2014. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HTA editors and publisher have tried to ensure the accuracy of the authors’ report and would like to thank the reviewers for their constructive comments on the draft document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the HTA programme or the Department of Health. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the HTA programme or the Department of Health.
