Plain English summary

The care programme approach in England and care and treatment planning in Wales are systems designed to provide mental health service users with a named care co-ordinator who meets regularly with the service user, oversees their care and develops a written plan to guide the care that they receive. These approaches are meant to help people towards recovery. In this study, we investigated whether care is organised to help people's recovery and whether this is done in a personalised way.

We identified six NHS trust/health board sites in England and Wales, and surveyed staff and service users to measure views on recovery, empowerment and therapeutic relationships. At each site we also interviewed managers, clinical staff care co-ordinators, service users and carers about their experiences of care planning.

We found that good relationships are important for service users, carers and care co-ordinators in care planning and supporting recovery. Experiences of care planning and co-ordination varied within all sites. People do not always feel involved in their own care. The understanding of recovery and personalisation varied among the service users and staff interviewed. Workers say that there is too much paperwork and, like service users, they rarely look at care plans once written. Staff focus on risk but this does not often appear to be discussed with people using services, which may be problematic.

We recommend research to investigate new ways of working and training to increase staff contact time with service users and carers and to improve a focus on recovery.

Criteria for inclusion in the *Health Services and Delivery Research* journal

Reports are published in *Health Services and Delivery Research* (HS&DR) if (1) they have resulted from work for the HS&DR programme or programmes which preceded the HS&DR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

HS&DR programme

The Health Services and Delivery Research (HS&DR) programme, part of the National Institute for Health Research (NIHR), was established to fund a broad range of research. It combines the strengths and contributions of two previous NIHR research programmes: the Health Services Research (HSR) programme and the Service Delivery and Organisation (SDO) programme, which were merged in January 2012.

The HS&DR programme aims to produce rigorous and relevant evidence on the quality, access and organisation of health services including costs and outcomes, as well as research on implementation. The programme will enhance the strategic focus on research that matters to the NHS and is keen to support ambitious evaluative research to improve health services.

For more information about the HS&DR programme please visit the website: <http://www.nets.nihr.ac.uk/programmes/hsdr>

This report

The research reported in this issue of the journal was funded by the HS&DR programme or one of its preceding programmes as project number 11/2004/12. The contractual start date was in October 2012. The final report began editorial review in December 2014 and was accepted for publication in May 2015. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HS&DR editors and production house have tried to ensure the accuracy of the authors' report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health.
