Community pharmacy interventions for public health priorities

Public Health Research 2016; Vol. 4: No. 2
DOI: 10.3310/phr04020

NIHR Journals Library www.journalslibrary.nihr.ac.uk
Plain English summary

Alcohol misuse, smoking and obesity are public health priorities; poorer and more vulnerable people are more likely to have a problem with alcohol, smoking and being overweight. Most people live near a pharmacy, and pharmacies are often found in poor areas and open long hours. Pharmacies may therefore be a useful place to help those people most in need and people who may not visit other health-care settings, such as doctors’ surgeries or primary care centres.

We found 24 studies that compared a pharmacy-based intervention with doing nothing or another type of intervention that could have also been set in a pharmacy or elsewhere. We found that smoking cessation studies set in pharmacies help adults to stop smoking, especially when compared with doing nothing. Not enough studies of interventions for alcohol misuse have been conducted to draw conclusions. Pharmacy-based weight loss interventions helped adults to lose about the same amount of weight as similar interventions led by nurses in doctors’ surgeries, but not as much as commercial weight management services. Studies that aimed to help people control their diabetes mellitus, and reduce their cholesterol or blood pressure by better management of their medicines and by making changes to their lifestyle, were effective but did not help these people to lose weight at the same time.

Hardly any of the studies looked at whether or not the different characteristics of people, such as their income, made a difference to how well the interventions worked or how fair these interventions are across the whole population.
Criteria for inclusion in the Public Health Research journal

Reports are published in Public Health Research (PHR) if (1) they have resulted from work for the PHR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

Reviews in Public Health Research are termed ‘systematic’ when the account of the search, appraisal and synthesis methods (to minimise biases and random errors) would, in theory, permit the replication of the review by others.

PHR programme

The Public Health Research (PHR) programme, part of the National Institute for Health Research (NIHR), evaluates public health interventions, providing new knowledge on the benefits, costs, acceptability and wider impacts of non-NHS interventions intended to improve the health of the public and reduce inequalities in health. The scope of the programme is multi-disciplinary and broad, covering a range of interventions that improve public health. The Public Health Research programme also complements the NIHR Health Technology Assessment programme which has a growing portfolio evaluating NHS public health interventions.

For more information about the PHR programme please visit the website: http://www.nets.nihr.ac.uk/programmes/phr

This report

The research reported in this issue of the journal was funded by the PHR programme as project number 12/153/52. The contractual start date was in March 2014. The final report began editorial review in March 2015 and was accepted for publication in July 2015. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The PHR editors and production house have tried to ensure the accuracy of the authors’ report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the PHR programme or the Department of Health. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the PHR programme or the Department of Health.
