Measuring harm in Welsh NHS hospitals
Health Services and Delivery Research 2017; Vol. 5: No. 9
DOI: 10.3310/hsdr05090

Plain English summary

Studies conducted around the world report that 1 in 10 patients will have something happen to them during their stay in hospital that will harm them. We have assessed longitudinally, over 4 years, the percentage of Welsh patients who are injured or who have complications as a result of their treatment in order to assess where improvements can be made to health care and health-care processes. We confirm that 10% of patients experience this harm in Wales, a similar proportion to that reported in other countries, and around half of these events could be prevented if hospitals addressed their causes through improvement projects.

We compared different methods to measure the problems that commonly happen, such as infections, surgical complications and mistakes prescribing and administering medications. The Global Trigger Tool in this setting was inconsistent and overall under-reported these harm events, and the Harvard two-stage process was too cumbersome for routine use. We have developed a new tool, taking the best of both approaches, and a method by which individual hospitals can identify where patients are most at risk of being injured during the course of hospital care. Recognising this risk to patients offers the opportunity for hospitals to target problem areas to reduce the number of patients exposed to injuries or complications. If an approach of monitoring was continued across NHS Wales, Wales could become an international leader in patient safety. In the longer term, health-care safety measures that affect a small proportion of patients need to be placed in the context of the enormous benefits of health care to whole populations.
Criteria for inclusion in the Health Services and Delivery Research journal

Reports are published in Health Services and Delivery Research (HS&DR) if (1) they have resulted from work for the HS&DR programme or programmes which preceded the HS&DR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

HS&DR programme

The Health Services and Delivery Research (HS&DR) programme, part of the National Institute for Health Research (NIHR), was established to fund a broad range of research. It combines the strengths and contributions of two previous NIHR research programmes: the Health Services Research (HSR) programme and the Service Delivery and Organisation (SDO) programme, which were merged in January 2012.

The HS&DR programme aims to produce rigorous and relevant evidence on the quality, access and organisation of health services including costs and outcomes, as well as research on implementation. The programme will enhance the strategic focus on research that matters to the NHS and is keen to support ambitious evaluative research to improve health services.

For more information about the HS&DR programme please visit the website: http://www.nets.nihr.ac.uk/programmes/hsdr

This report

The research reported in this issue of the journal was funded by the HS&DR programme or one of its preceding programmes as project number 09/2001/28. The contractual start date was in February 2011. The final report began editorial review in February 2016 and was accepted for publication in June 2016. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HS&DR editors and production house have tried to ensure the accuracy of the authors’ report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health.
