Declared competing interests of authors: Frank Kee was a member of the Public Health Research (PHR) Funding Board 2009–19 and the PHR Prioritisation Group 2016–19. Ruth F Hunter has received a National Institute for Health Research (NIHR) Career Development Fellowship. Ruth F Hunter and Wendy Hardeman have received funding from the NIHR Public Health Research programme separately from the current project grant. Wendy Hardeman has received funding from AbbVie Ltd (North Chicago, IL, USA) for consultancy outside the current project. The Northern Ireland Clinical Trials Unit received funds through the NIHR Public Health Research programme for its involvement in the study.
Many older people would benefit from taking more regular physical activity, especially those living in areas of socioeconomic disadvantage. Interventions delivered by trained members of the public who are from a similar background and of a similar age have shown promise at increasing people’s physical activity levels in previous research. These individuals are known as peer mentors. This study aimed to develop an intervention, to be delivered by peers, to enable older adults to become more active. The practicality of delivering and evaluating this intervention was then tested in a trial.

The ‘Walk with Me’ intervention was developed using guidance from previous successful interventions and with input from older adults. Interviews with older people from socioeconomically disadvantaged communities indicated that many lived busy lives and felt that having a peer mentor to walk with would help them become more active. Interviews also indicated that the intervention should be tailored to individuals’ abilities using personalised physical activity goals, such as daily step goals.

Fifty individuals aged 60–70 years agreed to take part. Half were allocated by chance to a 12-week walking intervention and half to a control group who received an information booklet on how to become active. The intervention group monitored their daily steps using a pedometer. These individuals met with a peer mentor to set walking goals and take part in physical activity in their local community. After 6 months, most participants (93%) were still in the study and returned information. Participants rated the intervention favourably in in-depth interviews and reported increasing their activity. However, the study was not large enough to show if this was a real change. The study showed that it would be possible to conduct a study to definitively test if a walking intervention delivered by peer mentors can increase older adults’ physical activity.
Criteria for inclusion in the *Public Health Research* journal

Reports are published in *Public Health Research* (PHR) if (1) they have resulted from work for the PHR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

Reviews in *Public Health Research* are termed ‘systematic’ when the account of the search, appraisal and synthesis methods (to minimise biases and random errors) would, in theory, permit the replication of the review by others.

**PHR programme**

The Public Health Research (PHR) programme, part of the National Institute for Health Research (NIHR), evaluates public health interventions, providing new knowledge on the benefits, costs, acceptability and wider impacts of non-NHS interventions intended to improve the health of the public and reduce inequalities in health. The scope of the programme is multi-disciplinary and broad, covering a range of interventions that improve public health. The Public Health Research programme also complements the NIHR Health Technology Assessment programme which has a growing portfolio evaluating NHS public health interventions.

For more information about the PHR programme please visit the website: http://www.nets.nihr.ac.uk/programmes/phr

**This report**

The research reported in this issue of the journal was funded by the PHR programme as project number 12/133/04. The contractual start date was in December 2014. The final report began editorial review in May 2018 and was accepted for publication in October 2018. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The PHR editors and production house have tried to ensure the accuracy of the authors’ report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the PHR programme or the Department of Health and Social Care. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the PHR programme or the Department of Health and Social Care.
