

# Having treatment for a urethral stricture?

(a narrowing of the water tube)

[www.opentrial.co.uk](http://www.opentrial.co.uk)

If you've decided to have treatment for a urethral stricture you may be able to take part in a research study called the OPEN trial.

The OPEN trial is about comparing two common operations for urethral strictures in men.

To take part you will be:

- Male age 16 years or older;
- With a stricture in the middle of your urethra (a bulbar stricture);
- Have received treatment for it at least once before;
- Your symptoms have returned and now you require another operation.

If you would like to find out more, please ask your urologist or nurse to tell you about the **OPEN trial**.
