Plain English summary

A new system in NHS dentistry in England is being tested, which involves putting patients into traffic light (TL) categories: 'red' for high, 'amber' for medium and 'green' for low risk of dental disease. Currently, it is not known whether or not dentists talk to patients about risk, whether or not patients find TL risk information useful and if this leads to improved behaviours such as better toothbrushing. New camera technology, Quantitative Light-Induced Fluorescence (QLF™) (Inspektor Research Systems AB, Amsterdam, the Netherlands), is also available and produces attention-grabbing photographs with unbrushed areas highlighted in red. Whether or not patients appreciate this information and use it to improve their brushing is not known.

First, a literature review was carried out to see whether or not the form in which risk information is presented to patients is valued and useful. This review found only 12 studies, mainly showing that even if information is presented visually or with computers, patients still want to discuss information to make it meaningful.

Second, an experiment was conducted in four dental practices involving 412 patients who were given (1) TL information, (2) QLF photographs or (3) just verbal information. Information on oral health was collected from patients, QLF images of their teeth were taken and telephone interviews were conducted 6 and 12 months later. It was found that 51% of patients liked verbal information best, 35% of patients liked QLF photographs best and 14% of patients liked TL information best; this varied between practices. When patients were asked to value information, TL was valued least. Although there was a slight improvement in patients' reports of toothbrushing and amount of sugar in drinks, there was no difference between the three types of information tested.

Third, 368 dental appointments were observed and 30 patients and 16 dental staff were interviewed. Mixed views were found about TL and QLF information but, mostly, what patients really want is detailed, personal, verbal information from their dentist.

Criteria for inclusion in the *Health Services and Delivery Research* journal

Reports are published in *Health Services and Delivery Research* (HS&DR) if (1) they have resulted from work for the HS&DR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

HS&DR programme

The HS&DR programme funds research to produce evidence to impact on the quality, accessibility and organisation of health and social care services. This includes evaluations of how the NHS and social care might improve delivery of services.

For more information about the HS&DR programme please visit the website at <https://www.nihr.ac.uk/explore-nihr/funding-programmes/health-services-and-delivery-research.htm>

This report

The research reported in this issue of the journal was funded by the HS&DR programme or one of its preceding programmes as project number 13/33/45. The contractual start date was in September 2014. The final report began editorial review in November 2017 and was accepted for publication in April 2018. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HS&DR editors and production house have tried to ensure the accuracy of the authors' report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health and Social Care. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health and Social Care.
