Declared competing interests of authors: David Fitzpatrick is a member of the Health Technology Assessment (HTA) Elective and Emergency Specialist Care Panel (2019 to present) and the HTA Prioritisation Committee (2019 to present). Robert Harris-Mayes reports grants from Swansea University during the conduct of the study. Yvette LaFlamme-Williams was employed by the Welsh Ambulance Service NHS Trust as a paramedic site researcher. Her position (on a fixed-term contract) was funded by Swansea University. Suzanne Mason is a member of the Health Services and Delivery Research (HSDR) Commissioned Panel (2013 to present). Heather Morgan reports that her work was funded by the main grant to Swansea University through a subcontract from the University of Aberdeen during the conduct of the study. Katherine McNee reports personal fees from South Western Ambulance Service NHS Foundation Trust during the conduct of the study. Nigel Rees reports grants from Health and Care Research Wales during the conduct of the study. Helen Snooks is a member of the HTA and Efficacy and Mechanism Evaluation Editorial Board (2012 to present) and is a HSDR Senior Scientific Advisor (2016 to present).

Plain English summary

We examined the use of electronic health records by emergency ambulance services. There is considerable variation in patient records among UK ambulance trusts, from entirely paper-based systems to fully electronic records, despite national policy encouraging the introduction of electronic health records. We were interested in the effect of using electronic health records on working practices, and whether or not these records helped ambulance services reduce the number of patients conveyed to hospital.

Work package 1 was a rapid literature review. Initially, we searched relevant databases using search terms such as 'electronic record', 'paramedic' and 'ambulance'. This search returned 1464 results, which were whittled down to 18 relevant articles from around the world. These articles covered varying types of electronic health records and showed varying results. The expected benefits were not always obtained, but a range of positive benefits were identified.

For work package 2, we interviewed at least one representative of each UK ambulance service. Seven services were using electronic health records, with varying durations of up to 10 years. Four services were in the process of introducing electronic systems.

Work package 3 involved a more detailed study of four ambulance services selected for being in different stages of implementing electronic health records. The study involved focus groups with paramedics, observations on-board ambulances and interviews with stakeholders in each local health community and ambulance service.

For work package 4, a dissemination event was held to which a wide range of participants were invited. The results that had been obtained so far were presented and a lively discussion ensued.

We found that there is no common standard of hardware or software for electronic health records. Many services were in the process of changing systems. Often, there is indirect data input, with data entered after the event. There seems to be little direct transfer of data from the devices into the hospital systems. The devices seem to be used mainly as data stores.

Criteria for inclusion in the *Health Services and Delivery Research* journal

Reports are published in *Health Services and Delivery Research* (HS&DR) if (1) they have resulted from work for the HS&DR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

HS&DR programme

The HS&DR programme funds research to produce evidence to impact on the quality, accessibility and organisation of health and social care services. This includes evaluations of how the NHS and social care might improve delivery of services.

For more information about the HS&DR programme please visit the website at <https://www.nihr.ac.uk/explore-nihr/funding-programmes/health-services-and-delivery-research.htm>

This report

The research reported in this issue of the journal was funded by the HS&DR programme or one of its preceding programmes as project number 14/47/22. The contractual start date was in March 2016. The final report began editorial review in October 2018 and was accepted for publication in April 2019. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HS&DR editors and production house have tried to ensure the accuracy of the authors' report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health and Social Care. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health and Social Care.
