## Plain English summary

All of us, as patients, expect our doctors to be competent. If they are not, we expect them to be stopped from practising. However, there is a wider problem that is more difficult to address, and that is doctors who underperform. These doctors do not need to stop practising but, to keep patients safe, they need help. This could be through retraining in a certain area, or perhaps addressing underlying physical or mental health problems. Bringing a doctor's performance back to an acceptable standard is called 'remediation'. Remediation covers a range of interventions aimed at improving performance, from a 'quiet word in the ear' to more formal training programmes.

There is a variety of literature relating to the remediation of doctors. To combine this literature in an understandable way, we followed an approach called 'realist review'. This allowed us to analyse a wide range of relevant literature to better understand how and why remediation works for some doctors. It also allowed us to include the perspectives of stakeholders (e.g. those involved in delivering remediation for doctors, those receiving remediation, patient representatives, academics and medical educators).

We found the following:

- Remediation works when it develops a doctor's insight and motivation, and supports behaviour change.
- Ensuring that doctors have a safe space to talk about their performance issues, where they do not feel judged, was important, as was having a neutral person to support them through the process.
- Involving the remediating doctor in remediation planning can provide a perceived sense of control in the process. This, along with identifying the cause, goal-setting, destigmatising remediation and clarity of consequences, helps motivate doctors to change.
- Sustained change may be facilitated by practising new behaviours and skills and through guided reflection.

The report provides recommendations for policy-makers and leaders of remediation programmes on the design of remediation interventions.

## Criteria for inclusion in the *Health Services and Delivery Research* journal

Reports are published in *Health Services and Delivery Research* (HS&DR) if (1) they have resulted from work for the HS&DR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

## HS&DR programme

The HS&DR programme funds research to produce evidence to impact on the quality, accessibility and organisation of health and social care services. This includes evaluations of how the NHS and social care might improve delivery of services.

For more information about the HS&DR programme please visit the website at <https://www.nihr.ac.uk/explore-nihr/funding-programmes/health-services-and-delivery-research.htm>

## This report

The research reported here is the product of an HS&DR Evidence Synthesis Centre, contracted to provide rapid evidence syntheses on issues of relevance to the health service, and to inform future HS&DR calls for new research around identified gaps in evidence. Other reviews by the Evidence Synthesis Centres are also available in the HS&DR journal.

The research reported in this issue of the journal was funded by the HS&DR programme or one of its preceding programmes as project number 17/06/04. The contractual start date was in April 2018. The final report began editorial review in January 2020 and was accepted for publication in July 2020. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HS&DR editors and production house have tried to ensure the accuracy of the authors' report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health and Social Care. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, NETSCC, the HS&DR programme or the Department of Health and Social Care.
