Plain English summary

Making change in health and care services is often complicated. There is growing awareness that change processes are difficult because people have different preferences and agendas about the nature of change. These diverse and competing agendas underlie what is sometimes called the 'micropolitics' or small 'p' politics of the health service. The ability to recognise and deal with these differences requires a distinct set of skills and abilities that are called 'political skill' or 'political astuteness'.

This study aimed to understand how political astuteness can help to manage the competing preferences and agendas that complicate health services change, especially when trying to implement large-scale or major change in regional health and care systems. By completing this research, the study planned to produce new learning materials and resources to support future service leaders to develop and use these skills.

The study involved four activities. The first involved a review of the existing evidence on the use of 'political skill' and 'political astuteness' in leading change. This helped to clarify the research focus and identify gaps in the literature. The second involved carrying out interviews with health and care leaders to understand their views and experiences about the politics of change, and how they have used or observed others using political skills and behaviours when implementing change. The third involved in-depth research with three examples of regional major system change to understand how these skills and behaviours were used in real time. The fourth involved working with various stakeholder groups to review the study findings and produce a set of learning resources and materials to help future health service leaders develop their own political skills.

The study found that a particular view of 'political skill' has come to dominate academic thinking, and that this is becoming more common in health services research. However, it also showed that this view can emphasise highly individualised psychological qualities while potentially neglecting more relational and situated qualities. For this reason, the study recommends taking a broad view of political skills, strategies and actions. The interview study with health and care leaders elaborated the different types of skills, strategies and actions used to understand and address the politics of change, leading to a new framework that has more direct relevance to health and care services. This framework was then used to analyse the experiences of implementing major system change in three NHS regions, leading to a more developed understanding of the contingencies and collective processes of implementing change. Finally, these findings were used to co-design a set of learning resources that were piloted and tested with different groups, with the intention of making them available to other leadership development programmes.

Criteria for inclusion in the *Health and Social Care Delivery Research* journal

Reports are published in *Health and Social Care Delivery Research* (HSDR) if (1) they have resulted from work for the HSDR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

HSDR programme

The HSDR programme funds research to produce evidence to impact on the quality, accessibility and organisation of health and social care services. This includes evaluations of how the NHS and social care might improve delivery of services.

For more information about the HSDR programme please visit the website at <https://www.nihr.ac.uk/explore-nihr/funding-programmes/health-and-social-care-delivery-research.htm>

This report

The research reported in this issue of the journal was funded by the HSDR programme or one of its preceding programmes as project number 16/52/04. The contractual start date was in December 2017. The final report began editorial review in March 2021 and was accepted for publication in October 2021. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HSDR editors and production house have tried to ensure the accuracy of the authors' report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health and Care Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, the HSDR programme or the Department of Health and Social Care. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, the HSDR programme or the Department of Health and Social Care.
