Plain English summary

Workers who 'speak up' or 'raise concerns' about problems with health-care services make an important contribution to patient safety in the NHS, but they are often ignored and/or mistreated by colleagues. The aim of this study was to better understand a new role called a 'Freedom to Speak Up Guardian' (also known as a 'Guardian'), which was recently introduced in NHS England to support workers to speak up. We wanted to find out how Guardians were being introduced in acute trusts and mental health trusts, their experiences of working as Guardians and whether or not and how they helped workers to 'speak up' about their concerns. We used three different approaches to find out more.

First, we reviewed other studies that had tried to understand and improve speaking up in health care. An important finding was that researchers need to further consider workplace culture and broader societal culture when trying to improve speaking up, as these are important in understanding why some attempts to improve speaking up work and other attempts do not.

We then interviewed 87 Guardians and found that there were many different approaches taken by NHS trusts when introducing the Guardian role. Some Guardians worked full time and had access to resources, whereas others were allocated little time, no resources and worked as a Guardian alongside another role. Following this, we spent 3 months in six trusts observing and interviewing 106 Guardians and others who worked closely with Guardians. Overall, we concluded that the ideal introduction of the Guardian role had the following ingredients: (1) key people in the trust shared the view that the Guardian role was important for a positive workplace culture; (2) a trust introduced policies that supported these views; (3) a trust frequently evaluated the introduction of the role; and (4) there had to be sufficient time and resources to best support speaking up by workers and the well-being of the Guardian.

Criteria for inclusion in the *Health and Social Care Delivery Research* journal

Reports are published in *Health and Social Care Delivery Research* (HSDR) if (1) they have resulted from work for the HSDR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

HSDR programme

The HSDR programme funds research to produce evidence to impact on the quality, accessibility and organisation of health and social care services. This includes evaluations of how the NHS and social care might improve delivery of services.

For more information about the HSDR programme please visit the website at <https://www.nihr.ac.uk/explore-nihr/funding-programmes/health-and-social-care-delivery-research.htm>

This report

The research reported in this issue of the journal was funded by the HSDR programme or one of its preceding programmes as project number 16/116/25. The contractual start date was in May 2018. The final report began editorial review in March 2021 and was accepted for publication in July 2021. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HSDR editors and production house have tried to ensure the accuracy of the authors' report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health and Care Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, the HSDR programme or the Department of Health and Social Care. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, the HSDR programme or the Department of Health and Social Care.
