Declared competing interests of authors: Marian C Brady reports grants from the Chief Scientist Office, the Scottish Government Health and Social Care Directorates, the European Union Cooperation in Science and Technology (COST)-funded Collaboration of Aphasia Scientists [IS1208, www.aphasiatrials.org (accessed 5 June 2020)] and The Tavistock Trust for Aphasia, during the conduct of the study, and is a member of the Royal College of Speech and Language Therapists. Audrey Bowen reports that data from her research is included in the analyses in the REhabilitation and recovery of peopLE with Aphasia after StroK E (RELEASE) report. Her post at the University of Manchester is partly funded by research grants and personal awards from the National Institute for Health and Care Research (NIHR) and the Stroke Association. Caterina Breitenstein reports grants from the German Federal Ministry of Education and Research during the conduct of the study. Erin Godecke reports Western Australian State Health Research Advisory Council Research Translation Project grants RSD-02720; 2008/9, during the conduct of the study. Neil Hawkins reports grants from NIHR during the conduct of the study. Katerina Hilari reports grants from the Stroke Association, from the European Social Fund and Greek National Strategic Reference Framework, and from The Tavistock Trust for Aphasia, outside the submitted work. Petra Jaecks reports a PhD grant from Weidmüller Stiftung. Anthony Pak-Hin Kong reports funding from the National Institutes of Health (NIH). Brian MacWhinney reports grants from the National Institutes of Health (NIH). Rebecca Marshall reports grants from the National Institute of Deafness and Other Communication Disorders and NIH during the conduct of the study. Rebecca Palmer reports grants from the NIHR senior clinical academic lectureship, from the NIHR Health Technology Assessment programme and from The Tavistock Trust for Aphasia outside the submitted work.

Plain English summary

Worldwide, > 3.5 million people each year have a stroke that causes aphasia. Aphasia is a language problem that affects speaking, understanding of speech, reading and writing. Speech and language therapy supports aphasia recovery, but therapists need better information about what type of therapy, how often, for how many hours each week and for how long gets the best recovery. We explored how language recovery relates to speech and language therapy, stroke and type of aphasia.

We made a database from 5928 people with aphasia after stroke, in 174 studies across 28 countries. We used information about how each person recovered (or did not recover) following speech and language therapy. We explored the patterns of language recovery, what predicted recovery and what type of therapy was linked to the greatest improvements, for whom and when.

Language recovery was influenced by a stroke survivor’s age, their aphasia severity and how long it took to start therapy. Language scores improved for all groups but improved most among people who had speech and language therapy, those aged ≤ 55 years, and those who started speech and language therapy soon after their stroke. Improvements lessened as time after stroke increased.

The greatest gains in language, on average, were seen among people who had speech and language therapy 3 to 5 days per week, for 2 to 4 hours each week; understanding of speech improved most with speech and language therapy for > 9 hours over 3 or 4 days per week. Improvements were greatest when 20–50 hours of therapy were delivered. Specific approaches to therapy may suit some people more than others. We need to investigate how best to adapt speech and language therapy to suit a person’s age and sex, the severity of their aphasia and how long it has been since their stroke. Speech and language therapy that was relevant to patients’ needs was associated with the best gains.

Health and Social Care Delivery Research (HSDR) was launched in 2013 and is indexed by Europe PMC, DOAJ, INAHTRA, Ulrichsweb™ (ProQuest LLC, Ann Arbor, MI, USA) and NCBI Bookshelf.

This journal is a member of and subscribes to the principles of the Committee on Publication Ethics (COPE) (www.publicationethics.org/).

Editorial contact: journals.library@nihr.ac.uk

This journal was previously published as Health Services and Delivery Research (Volumes 1–9); ISSN 2050-4349 (print), ISSN 2050-4357 (online)

The full HSDR archive is freely available to view online at www.journalslibrary.nihr.ac.uk/hsdr.

Criteria for inclusion in the Health and Social Care Delivery Research journal

Reports are published in Health and Social Care Delivery Research (HSDR) if (1) they have resulted from work for the HSDR programme, and (2) they are of a sufficiently high scientific quality as assessed by the reviewers and editors.

HSDR programme

The HSDR programme funds research to produce evidence to impact on the quality, accessibility and organisation of health and social care services. This includes evaluations of how the NHS and social care might improve delivery of services.

For more information about the HSDR programme please visit the website at https://www.nihr.ac.uk/explore-nihr/funding-programmes/health-and-social-care-delivery-research.htm

This report

The research reported in this issue of the journal was funded by the HSDR programme or one of its preceding programmes as project number 14/04/22. The contractual start date was in December 2018. The final report began editorial review in March 2019 and was accepted for publication in April 2020. The authors have been wholly responsible for all data collection, analysis and interpretation, and for writing up their work. The HSDR editors and production house have tried to ensure the accuracy of the authors’ report and would like to thank the reviewers for their constructive comments on the final report document. However, they do not accept liability for damages or losses arising from material published in this report.

This report presents independent research funded by the National Institute for Health and Care Research (NIHR). The views and opinions expressed by authors in this publication are those of the authors and do not necessarily reflect those of the NHS, the NIHR, the HSDR programme or the Department of Health and Social Care. If there are verbatim quotations included in this publication the views and opinions expressed by the interviewees are those of the interviewees and do not necessarily reflect those of the authors, those of the NHS, the NIHR, the HSDR programme or the Department of Health and Social Care.
